The military revolution is a conceptual schema for explaining the transformation of European military strategy, tactics, and technology in the early modern period. The argument is that dramatic advances in technology, government finances, and public administration transformed and modernized European armies, tactics, and logistics. The choice of a social and political order, and its replacement by something new. There is no shortage of debate on the causes and effects of the Revolution, and how one sees it is often a reflection of the contemporary political climate.
